NEXT Renewable Fuels, Inc. Hires Gene Cotten as SVP Project Execution & Engineering

Houston, Texas – September 10th 2020 – NEXT Renewable Fuels has hired Gene Cotten as Senior Vice President of Project Execution & Engineering. Mr. Cotten brings his over 35 years of experience in project design, engineering and execution in the gas, oil and energy industry. Mr. Cotten has worked for several major energy companies as well as over a decade of project design and execution as a third-party consultant. As a third-party adviser Mr. Cotten has worked on NEXT’s Oregon renewable diesel project for the past 3 years making his transition to the full-time project manager a natural progression as the project enters its FEED and construction phase.

“NEXT is very pleased to have Mr. Cotten join our company as a senior member of our executive team and the lead for our Port Westward project. His unique mix of experiences with chemical, mechanical and design engineering along with hands-on plant operations in both traditional energy and renewable energy projects make Gene the ideal person to lead NEXT project through the design and construction phases and into operations”, said Lou Soumas, President of NEXT.

More information about the NEXT Project is available at the company’s NEXT Project Page at www.nextrenewables.com.

NEXT Renewables is building a state-of-the-art facility at Port Westward to produce advanced green diesel. Our project is currently in the planning and permitting phase. For more information contact, Lou Soumas, President, at (503) 867-8100.
